

# How to Install Berenson Hardware

## Replacing Hardware

If you are replacing pulls, you will need to determine the center to center of your pulls. To determine the center to center of a pull, use a ruler to measure the distance between the centers of the screw holes.

Once you have that measurement, you can go to our website, [BerensonHardware.com](http://BerensonHardware.com) and search for hardware with that center to center in our Pulls section.

If you are replacing knobs on your cabinets, the hardest thing you will have to do is decide which style to go with!

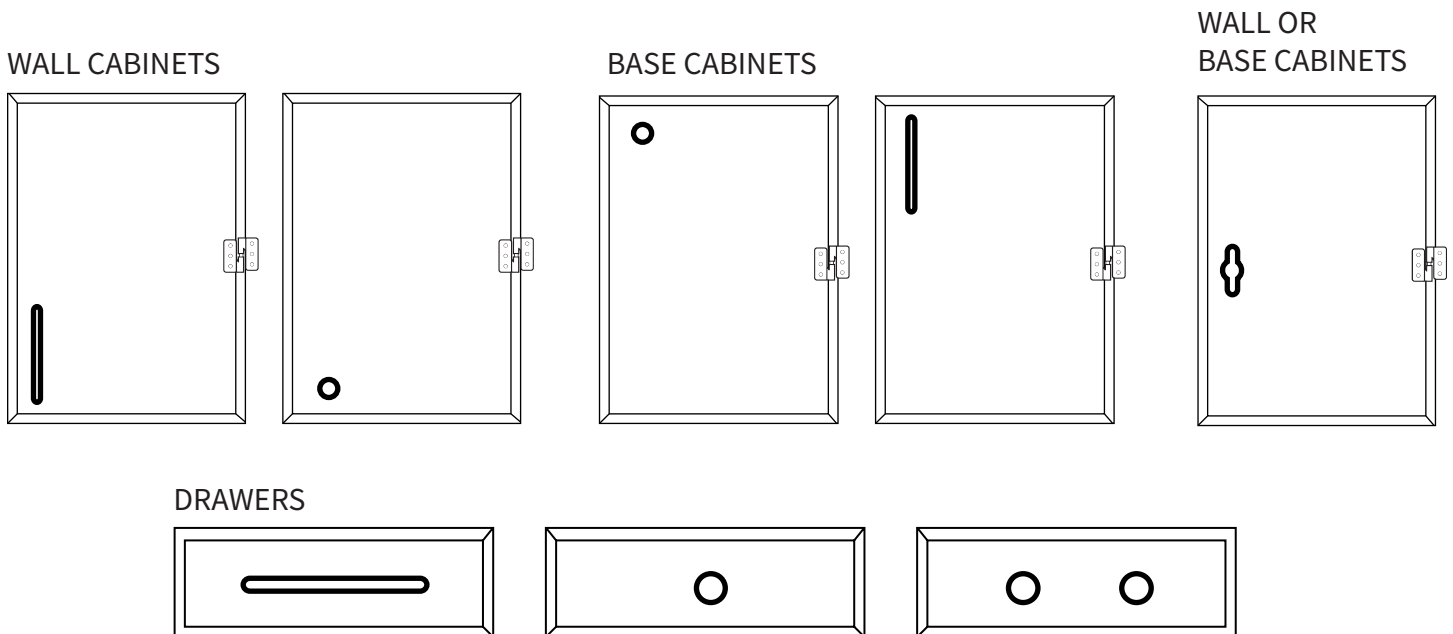

## Installing Cabinet Hardware for First Time

### Tools Required:

- Ruler or Cabinet Hardware Template
- Power Drill
- 3/16" Drill Bit
- Screwdriver

### Placement Tips

Where you place your hardware on a cabinet is entirely up to you. You can see some traditional placements of hardware below.

*Special consideration should be made when installing hardware on a drawer. Depending on the weight or length of the drawer, you may want to use a longer pull or two knobs spaced evenly apart.*

### Installation

When you have decided where you want your hardware placed, use a ruler or cabinet hardware template to mark the drilling locations. You'll want the placement to be the same across all cabinets for a consistent look. Once all the locations are marked you are ready to use your 3/16" drill bit and drill the holes.

Now, all that's left to do is install your gorgeous hardware and enjoy!
